**I've heard that the rabies vaccine is good for three years. If so, why are you recommending that my pet get it every year?** The rabies vaccine we use is licensed for one year only. Such a vaccine may be easier on your pet's system. Rabies is one of the deadliest zoonotic diseases known to man. Annual vaccination will ensure maximum immunity and protection for your pet AND your family against this deadly disease

**Does my pet need his/her other vaccines every year? I don't want to over-vaccinate.** Neither do we. That's why we don't recommend the feline leukemia vaccine for older cats or the leptospirosis vaccine for dogs in low risk environments. In addition, some vaccines in older pets (that have been properly vaccinated when young) can be administered at extended intervals (i.e. every 3 years or so) depending upon vaccine type, exposure risk and immunocompetence of your pet. Feel free to discuss the pros and cons of vaccination schedules with us at any time.

**My dog stays indoors. Why does he/she need to be on heartworm prevention?** Have you ever seen a mosquito in your home? Sure you have. And that means your dog is at risk of exposure to heartworms. Heartworm preventive medication also protects your dog against intestinal roundworms, which can also infect humans (especially children) and cause blindness (*ocular larval migrans*). In other words, heartworm medication not only protects your pet, but protects your family as well.

**Who do I call if I have an emergency with my pet?** As with people, a small percentage of pets may experience allergic reactions to vaccinations and/or certain medications. These reactions can vary from mild itching and swelling to life-threatening anaphylactic shock. Please notify the staff of Mobile Petcare Clinic of Texas of any sensitivities your pet may have that you are aware of prior to the administration of vaccines or medications. **IMPORTANT:** Mobile Petcare Clinic of Texas does not operate facilities that provide emergency service. In case of emergency, contact **Animal Emergency Room** 4315 Fredericksburg Rd # 2, San Antonio, TX 78201 at **(210) 737-7380** or **MissionVet Specialty and Emergency 8202 N Loop 1604 W, Suite 102, San Antonio, Texas 78249** at **(210-571-3439)**.

**What is feline fibrosarcoma?** Fibrosarcoma is a type of cancer occurring infrequently in cats that can be triggered by the body's immune response to inflammation caused by things like trauma, microchips, and injections, including vaccines. Although fibrosarcomas are rare and may require a genetic predisposition, all injection sites should be checked frequently for the development of lumps. If your cat develops a persistent lump at the site of an injection, we be surgically removed by your full-service veterinarian. Recombinant vaccines for cats are available. Ask for details

**What is your policy regarding writing prescriptions?** Upon request, we will gladly call-in a prescription for medications prescribed by our doctors to a vendor of your choice. As you can imagine, small businesses like ours can't compete with the big box retailers and large online pet pharmacies and hope to stay in business very long. In order to offset some of the price difference, we don't charge an office visit fee for our wellness services (immunizations, parasite control, etc.) and offer discounted heartworm tests for those clients who choose to buy their heartworm, flea, and tick preventatives "locally" from us.

That said, some clients request to pay the regular office visit fee of \$49 per pet for wellness services in order to have the prescription flexibility. Either way, we just want to make sure your pet is protected, regardless of where you choose to get his/her medications filled

Please note that for your pet's safety, third-party or online companies that fill pet prescriptions require strict compliances and quality oversight: as a result, annual check-ups and heartworm testing are needed for all prescriptions refills
